

# Machine Learning in the Future: A Timeline

There's no question that machine learning (ML) and artificial intelligence (AI) will continue to grow and play an ever-larger role in our lives. But how much and how quickly remains to be seen...

Here's a possible timeline of what we can look forward to:

## Coming soon

- **Your morning commute, navigated by a robot.**  
Safer, driverless cars mean less stress (no more fighting for a parking spot!).
- **Your retirement plan, mapped out by a robot.**  
The smartest investments, customized just for you.
- **Your lunch salad, tossed by a robot.**  
Finally, the perfect amount of dressing, every single time.
- **Your Sunday football game, refereed by a robot.**  
More accurate penalties and foul calls for the win.

## Not far off

- **Your house, cleaned by Rosie the Robot.**  
Hello, floors that sparkle!
- **Your vitals, checked by a virtual doctor.**  
Looking good, Smiles Davis.
- **Scientific research, conducted by bots.**  
Who knows what discoveries lie in the mountains of data that have been compiled over the years?
- **Space and the deep ocean, explored by bots.**  
Finally, we can unlock the secrets of the last of the uncharted territories!

## Happening someday...maybe

- **Your body, cured from the inside by nanobots.**  
Fewer surgeries and invasive treatments makes for happier, healthier patients.
- **Climate change, solved by AI.**  
Perhaps we won't have to move to the moon, after all.
- **Humans and robots merge into superhuman cyborgs.**  
Will this be better...or worse? You decide.
