Methodology

Individual browsing and purchasing data from over 5,000 retailers, in more than 80 countries. Q2 2018

Historically, Criteo has used a sales weighted approach since it has the potential to more closely approximate the true market number. We continue to use a sales-weighted approach when we think our data represents enough of the overall market to make this approach reasonable. When we have newer, emerging offerings – or cases where the distribution of usage is skewed towards a few clients – we report on an unweighted basis. The unweighted basis means that smaller clients have just as much input into the aggregate number as larger clients. Our Analytics and Insights team uses best professional judgment when determining which metric more accurately reflects our view of the underlying market trends.

Sales weighted: summary metric which is influenced by the volume of transactions generated by each retailer. Sales unweighted: summary metric where all retailers contribute equally to the aggregate.
